

# How to Connect an H.323/Polycom Room Unit to Your Zoom Meeting

You can connect an H.323/Polycom room unit to your Zoom meeting by either having the person using the H.323 unit dial into your meeting, or dialing out of your meeting to the H.323 unit or bridge. Either way, you begin the process the same way by starting your Zoom meeting.

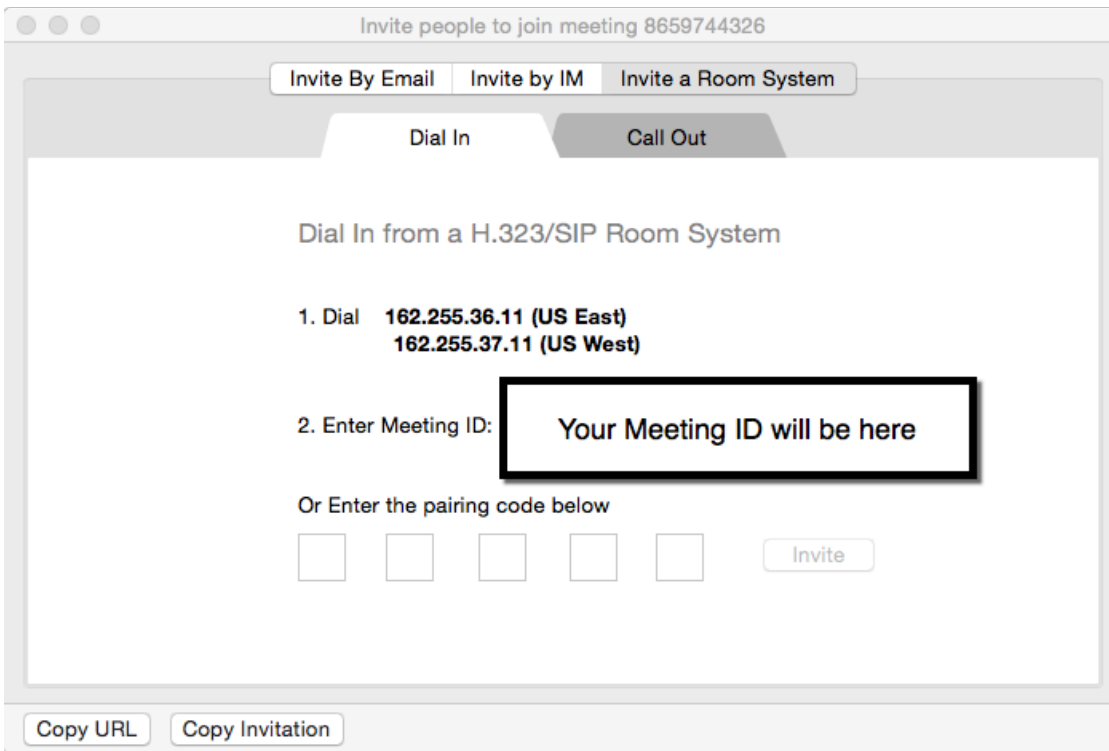

1. Once your Zoom meeting has started, click the **Invite** button at the bottom of the meeting screen.

2. On the invite screen, select **Invite a Room System**.

3. If the other person will be connecting to you, provide them with the information on the *Dial In* tab, including the numbers from #1 and your Meeting ID from #2.

4. If you need to call the other person, select the *Call Out* tab and enter the address they've provided you here, and click **Call**.
