

Information Taught in the TMNP is Helping Growers Save Money-Getting Better with Time!

The 2012-13 inaugural class of the Tennessee Master Nursery Program estimated saving \$4,272 per graduate in the first year from information gained and practices changed as a result of taking the course. Many of the new ways growers are approaching producing and selling plants will be annual savings, increasing the impact of the course over time.

Beginning in winter 2014, nursery growers indicated they saved on average \$6,812 due to knowledge gained and practices changed as a result of participating in the TMNP online program and an additional \$7,375 due to an increase in quality! Put the Tennessee Master Nursery Program to work for your nursery!
