

## KNOXVILLE, TENNESSEE

Knoxville was established in 1792 and was named after Henry Knox, President Washington's War Secretary. It is headquarters of The Tennessee Valley Authority. The Sunsphere was built for the 1982 World's Fair.

# DESIGN OF EXPERIMENTS FOR MANUFACTURERS AND SCIENTISTS

AUG 27-29, 2019

THE UNIVERSITY of  
**TENNESSEE**   
INSTITUTE of  
AGRICULTURE

## DESIGN OF EXPERIMENTS

Design of Experiments (DOE) refers to a process of planning an experiment so that appropriate data can be analyzed using statistical methods resulting in valid and objective conclusions. A designed experiment is a series of tests in which purposeful changes are made to input variables of a process or lab system so that we may observe and identify the objective reasons for changes in an output response. DOE facilitates the development of innovative robust products and/or processes. The fundamental principles of replication, randomization, and blocking are taught. Emphasis is given to minimizing the influence of “nuisance” factors during individual experimentation. The split-plot and nested designs for restrictions on randomization are important concepts for DOE in manufacturing settings.

## DESIGNING ROBUST PRODUCTS

A key challenge for businesses is to develop and sustain competitiveness by providing innovative and robust products. DOE provides a highly accepted set of statistical methods and experimentation protocols to enhance

scientific inference, improve decision making, and minimize business risk. DOE allows for the study of interaction effects of input factors which is not possible using the OFAT method or “one variable at time” experimentation. OFAT provides less information and results in more experimental runs or cost. Key methods taught for designing innovative and robust products are: split-plot and nested designs when randomization is restricted; response surface designs with and without blocking; mixture designs; and Taguchi robust product design.

## INSTRUCTOR

**Timothy M. Young, PhD**  
Professor | Graduate Director  
PhD NR (Statistics) The University of Tennessee  
MS Statistics, (Oper. Res.) The University of Tennessee  
MS Forest Economics (Statistics), University of Wisconsin  
BS Forestry, University of Wisconsin

### Memberships & Honors:

American Statistical Association  
American Society of Quality  
Forest Product Society (Past-President)  
Fulbright Scholar (Austria 2013-2014)  
Fulbright Specialist – Agricultural Statistics (Austria 2016)

Tim has 20 years of experience in the bio-based products industries with four years of experience with private sector in MDF manufacture. The Design of Experiments (DOE) course has been taught successfully since 2009. More than 20 companies have participated graduating more than 130 successful candidates through the course. The course has been taught off-site, privately for four companies.

## KEY CONCEPTS TAUGHT

MODERN DESIGN CONCEPTS INCLUDING KEY PRINCIPLES AND ASSUMPTIONS  
ANOVA AND THE GLM  
FULL FACTORIAL DESIGNS  
ANCOVA  
2K SCREENING DESIGNS  
SAMPLE SIZE AND POWER  
FRACTIONAL FACTORIALS AND PRINCIPLE OF ORTHOGONALITY  
RANDOMIZED COMPLETED BLOCK DESIGN  
SPLIT-PLOT AND NESTED DESIGNS  
BLOCKING AND CONFOUNDING WITH FRACTIONAL FACTORIALS  
RESPONSE SURFACE DESIGNS  
CENTRAL COMPOSITE DESIGN (CCD)  
BOX-BEHNKEN DESIGN  
MIXTURE DESIGNS AND EXTREME VERTICES DESIGNS  
SIMPLEX LATTICE  
AUGMENTED AND UNAUGMENTED

## COURSE DESCRIPTION

The Center for Renewable Carbon (CRC) at The University of Tennessee holds this training course which provides a comprehensive overview of the principles of designed experimentation for modern application in R&D experiments, product innovation, and process innovation; with applications for the technical lab progressing to the manufacturing plant floor. Designing robust products is a key learning outcome of the course. Candidates participate in hands on activities and work on PC-based exercises using real world process data (JMP 12 and Minitab 17 software). The course has easy to understand text which helps ensure a comfortable pace and fun learning experience benefiting the participants. The CRC offers this program to maintain a focus of providing and leading practical education for the industrial sector.

The course requires no prior knowledge of designed experimentations. Knowledge of basic statistics and PC/laptop usage is helpful. The course is taught in two Sessions with **Session I** to be held on **Aug 27-29, 2019**. The dates for **Session II** are agreed upon by participants at the end of Session I. The course is limited to 8 candidates. The fee of **\$3,350** covers lodging, food, registration, and local transportation for both sessions. The University of Tennessee, Division of Outreach & Continuing Education will award 4.0 CEU's to each participant, who successfully completed both sessions of the course. It can also be taken for 3 undergraduate or 3 graduate credit hours at UT (as approved by instructor) for additional tuition fee.

### DESIGNED FOR

- Technical Directors
- R&D Managers
- Quality Control Managers
- Product Innovation Engineers
- Continuous Improvement Specialists and Engineers
